

● IMPACT REPORT · QUARTER 1 · 2026–27

A quarter measured in what learners did.

Hash Future School, 1 June – 31 August 2026. Every number below is drawn from the school's own records — classes delivered, work submitted, habits recognised, families met, learners listened to. This is the evidence behind the promise.

AI-first online school · Ages 6–18

61 teaching days

13 learner cohorts

Financial data excluded by design

1,487

Classes scheduled across the quarter

2,851

Pieces of learner work submitted

300,206

Recognition points awarded

4.62

Average learner rating of a session / 5

We said we would go by what learners do. Here is the evidence.

This quarter Hash Future School opened its second academic year — thirteen cohorts, learners from six to eighteen, twenty-one facilitators, and a first proper full quarter of running an online school at scale with our own platform underneath it.

An impact report can easily become a brochure. We have tried to make this one an audit instead. It reports the things that went well and the things that did not, side by side, because the second list is what tells us where to spend next quarter.

So: 1,487 classes were scheduled and 1,129 of them were delivered. Learners submitted 2,851 pieces of work. Almost 300,000 points were awarded — and the largest single category of those points was not marks, it was **camera on**, followed by punctuality and simply submitting the assignment. 185 badges were earned, and most of them for habits rather than grades. Learners ran their own weekly webinars, ran their own election with thirty-eight positions, and entered forty-five external competitions between them.

They also told us, 3,583 times, how a class actually felt — and rated it 4.62 out of 5. But when we asked how *challenged* they felt, the honest answer was "not very". That finding is in this report, unedited, and it is the first thing we are fixing.

Thank you to the families who trusted us with a school year.

The Hash Future School team

Academic Year 2026–27 · Quarter 1 review

THE QUARTER AT A GLANCE

Reporting period

1 Jun – 31 Aug 2026

Teaching days with recorded learning

61

Active learners on roll

101

Distinct learners who attended

111 at peak (June)

Live classes scheduled / completed

1,487 / 1,129

Facilitators who taught

21

Parent accounts active

237

Data source

School platform, read-only

The quarter in twelve numbers.

Volume tells you whether the school actually ran. Depth tells you whether it worked. Here is both, in the metrics that matter most to a learning community — participation, output, recognition and voice.

1,487

Classes scheduled

Across 61 teaching days and 16 active rooms; 1,129 completed.

1,129

Classes completed

76% of everything scheduled, with attendance recorded in 977.

2,851

Pieces of work submitted

By 93 learners — 30.7 submissions each.

2,302

Pieces graded

81% of all work returned to learners with feedback.

300,206

Recognition points

Awarded through 41,300 separate recognition events.

185

Badges unlocked

By 76 learners, mostly for habits rather than marks.

12,342

Attendance records

61 teaching days, an average of 202 records a day.

71.7%

Participation rate

Present, late or partial — stable across all three months.

111

Learners active in June

The peak month for participation this quarter.

3,583

Session ratings given

92 learners rated 4.62 out of 5 on average.

22

Learner-led webinars

Weekly public sessions, mostly presented by students.

24

School events

Plus 26 external competitions entered by learners.

Monthly rhythm

Live classes scheduled vs delivered, and the learners who showed up.

Learner participation

Attendance participation rate and distinct learners active, by month.

Who this school is, right now.

Hash Future School is fourteen months old. In that time it has onboarded 575 accounts — learners, parents, facilitators and staff. This quarter it opened a new academic year: thirteen cohorts across three learning stages, ten of them configured in a single day in May and three more added in July as the intake grew.

Community composition

Active accounts in the school platform.

■ Learners (active)	101
■ Facilitators & staff	29
■ Parent accounts	237

Distinct learners active each month

Learners with at least one attendance record in the month.

Read this carefully: 111 learners were active in June but only 96 in August. The difference is real: 22 learners left the school during the quarter and 13 joined. Churn is the single most important number in this report, and it is discussed in full under Attendance.

COHORTS

13

Grade rooms running across primary, middle and higher stages — ten configured in May for 2026–27, three more added in July.

MENTORSHIP

14 groups

228 mentee placements — every learner who wanted one attached to a mentor group with a named primary mentor.

HOUSES

8 houses

Amber, Coral, Emerald, Garnet, Jade, Sapphire, Topaz and Zircon — plus five student-led Global Citizenship committees.

PARENTS ON PLATFORM

237

Active parent accounts receiving 6,068 daily parent reports during the quarter.

TEACHING TEAM

21

Facilitators who personally ran at least one class, out of twenty on roll and three who joined this quarter.

PROGRAMMES

2

SuperKids (223 members) and SuperLearn (13 members) running alongside the main school cohorts.

What was actually taught, made and marked.

1,487 classes were scheduled across 61 teaching days. 1,129 were completed, 795 new learning activities were published, and learners returned 2,851 pieces of work — an average of 30.7 submissions for each of the 93 learners who submitted anything at all.

Teaching time by subject

Completed and scheduled sessions per subject family, for the whole quarter.

Work submitted and marked

Submissions received each month, and how many were graded.

Worth being honest about: grading completion fell from 90% in July to 63% in August, and the school finished the quarter with 549 pieces of work never graded — 398 awaiting a first grade and 137 held back for revision. This is the clearest operational failure of the quarter, and it is owned in the "What's next" section.

LEARNING ACTIVITIES PUBLISHED

795

Worth 41,536 possible points. 273 in June, 330 in July, 192 in August.

AVERAGE MARKS AWARDED

91.7%

Across 2,300 graded pieces of work with a defined mark scheme.

WORK RETURNED FOR REVISION

137

Learners were given a second attempt rather than a zero — the school's default for incomplete mastery.

CURRICULUM RESOURCES ATTACHED

351

Plus 46 structured module items across two full activity modules and 104 activity discussions.

Mastery distribution

Where 2,300 marked submissions landed as a percentage of the marks available.

90–100% — **1,722** (74.9%)

75–89% — **343** (14.9%) 50–74% — **198** (8.6%)

Below 50% — **37** (1.6%)

Three quarters of all marked work scored 90% or above. Only 37 submissions fell below half marks — and every one of those generated feedback rather than a penalty.

Facilitator load

Classes personally delivered by each facilitator over the quarter.

Showing up — and what showing up looked like.

12,342 attendance records were logged across 61 teaching days. 71.7% were present, late or partially present. The rate was remarkably stable month to month — and just as remarkably, below where we want it.

ATTENDANCE RECORDS

12,342

Across 61 teaching days — an average of 202 records a day.

PARTICIPATION RATE

71.7%

Present, late or partial. 67.2% were fully present.

PRESENT RECORDS

8,269

Against 3,356 absences, 297 late arrivals, 281 partial attendances and 139 excused absences.

ATTENDANCE REGISTERS MARKED

977

Session reflections completed in 1,004 of the 1,129 delivered classes.

Attendance mix, month by month

Every recorded attendance outcome, as a share of that month's records.

June · 22 teaching days · 72.1% participating
4,038 records

July · 23 teaching days · 70.9% participating
4,799 records

August · 16 teaching days · 72.2% participating
3,505 records

■ Present ■ Late ■ Partial ■ Excused

■ Absent

Read August with the calendar in

mind: the school taught 22 days in June, 23 in July but only 16 in August. The last recorded sessions before the break were on 21 August and teaching resumed on 31 August, so August's smaller totals are a calendar fact rather than a drop in engagement — its participation rate (72.2%) was in fact the best of the quarter.

Participation signals

Two behaviours the school tracks separately from attendance.

Camera on  40.7%

Share of attendance records with the camera switched on.

Interacted in class  31.8%

Share of records where the learner actively participated.

Camera-on is the school's most rewarded behaviour (see Achievement) precisely because it is the hardest to get right in an online classroom. It is still only on in two of every five attendance records — real, measurable room to improve.

Cohort scoreboard

Every cohort's participation, output and recognition side by side. Read down the columns, not across the page.

COHORT	LEARNERS	ATTENDANCE RECORDS	PARTICIPATION	SUBMISSIONS	SUBS / LEARNER	POINTS / LEARNER
Explorers Lower	7	876	87.6%	297	42.4	3,777
Cosmos Higher	11	1,509	82.5%	482	43.8	4,440
Brainiacs Lower	6	809	77.5%	220	36.7	4,620
Brainiacs Higher	12	1,635	76.7%	299	24.9	2,952
SuperLearn Achievers	3	174	74.7%	27	9.0	670
Akmis Higher	10	1,258	74.2%	253	25.3	3,189
Explorers Middle	11	1,477	73.1%	383	34.8	3,116
Discovery Lower	12	1,609	73.0%	410	34.2	3,143
Akmis Grooming	4	360	64.4%	86	21.5	3,085
Explorers Higher	10	1,384	60.8%	260	26.0	2,910
SuperLearn Winners	4	50	14.0%	4	1.0	49

How to read this table: the two June "Explorers Induction" on-boarding groups are not listed, because those rooms closed once learners moved into their permanent cohorts. They deserve a mention anyway — 1,004 recorded attendances at 89.1% and 89.4% participation, the two highest rates anywhere in the school this quarter. A new learner's first two weeks at Hash Future School are the most reliably attended days they will have.

What the school chose to reward tells you what it values.

41,300 recognition events produced 300,206 points for 110 learners. Not one of the top five reasons is a mark. They are camera on, punctuality, participating, submitting the work, and researching independently.

Why points were awarded

The twenty-two most rewarded behaviours of the quarter, out of 39 distinct reasons.

Recognition by month

Total points awarded, and the average earned by each learner who was active that month.

■ Total points

POINTS PER
LEARNER

2,729

BADGES
EARNED

185

LEARNERS
RECOGNISED

110

House standings

Points earned during the quarter by house members.

CORAL		38,361
EMERALD		29,252
GARNET		27,481
TOPAZ		24,437
AMBER		23,528
JADE		23,463
ZIRCON		16,483
SAPPHIRE		14,916

Coral leads the year, but the spread matters more than the leader: every house earned across eleven weeks rather than winning on a single activity.

Badges unlocked

185 badges were unlocked during the quarter by 76 different learners — a rarity tier for a habit, not a mark.

Rare badges	68
Epic badges	41
Legendary badges	39
Common badges	30
Mythic badges	7

June		107 badges
July		52 badges
August		26 badges

The quarter outside the timetable.

Twenty-four school events, twenty-six external competitions entered, twenty-two webinars — most of them presented by learners themselves — and the school's first student election. This is where a curriculum stops being a syllabus.

SCHOOL EVENTS

24

15 open events and 9 in-house competitions, from World Environment Day to Independence Day.

EVENT REGISTRATIONS

689

Made by 84 individual learners — most of the school entered something.

EXTERNAL COMPETITIONS

45 entries

Across 17 different national and international competitions, by 29 learners.

LEARNER-LED WEBINARS

22

Weekly public webinars — the majority presented by students, not staff.

What students taught the school

Selected learner-led webinar topics this quarter.

We asked 3,583 times how a class felt.

Every learner can rate every session, and they do — 92 of them, across three months. The average is 4.62 out of 5. The distribution below matters more than the average, because it shows what the minority felt.

Session rating distribution

All 3,583 responses, 1 to 5 stars.

Seventy-eight percent of responses were a full five stars. 137 were rated one or two — less than four in a hundred, and each of those is read by the facilitator it is about.

How learners felt when the class ended

Chosen from a fixed list after every session.

Where learning actually came from

Learner-reported source of new learning in the session.

The honest finding of this quarter:

learners rate *understanding* and *enjoyment* above 4 out of 5, but *how challenged* they felt averages just 1.9, and *interest* 3.5. They are comfortable. Comfortable is not the same as stretched — and we are treating this as the school's central academic problem for Q2.

Session quality, as learners scored it

Average score out of 5, across the quarter.

76.5% of responses chose “confident” or “excited” after the session; shown here on the same five-point scale.

The lowest score in the whole survey — and the one we are acting on first.

RESPONSES

3,583

LEARNERS
RESPONDING

92

In their own words

Quoted verbatim from the “what I learned today” field at the end of a class. Spelling untouched; speakers kept anonymous.

“I researched about parents’ problems and tried to find a solution for lack of quality time with family”

EXPLORERS · HIGHER

“me and ruhan actually design a desk with multifeatures named drive desk m4”

BRAINIACS · LOWER

"I learned prompting in the RTCC way and also completed maintaining global peace"

COSMOS · HIGHER

"We presented our future in sports work"

EXPLORERS · MIDDLE

"I learned that gratitude is the best way to have happiness"

DISCOVERY · LOWER

"how to create a business idea that has two bottom-lines!!!"

AKMIS · HIGHER

"we made a prototype of an online shop website"

AKMIS · HIGHER

"about making your own shelter with cardboard tape and paper"

BRAINIACS · HIGHER

"I learned how to think kinda faster"

EXPLORERS · MIDDLE

"about anil menon and what he is doing today, and also i made a presentation about quadrilateral shapes"

EXPLORERS · LOWER

"protecting yourself with internet"

BRAINIACS · HIGHER

"i took the roll of Anchoring i did it well my roll i did it well so it was so good"

EXPLORERS · MIDDLE

PARENT-TEACHER MEETINGS

118

Structured feedback points recorded across 70 learners — a quarter of the school met a facilitator about an individual child.

DAILY REPORTS TO FAMILIES

6,068

Plus 4,455 daily learner reports — roughly 1.9 family-facing reports per learner per teaching day.

INTERVENTIONS LOGGED

124

32 parent calls, 25 attendance follow-ups, 24 mentoring check-ins, 24 enrichment referrals and 19 academic-doubt resolutions.

How families found the school — and what happened next.

Forty-four new enquiries, twenty-one demo requests, eleven formal applications and thirteen enrolments. The single most productive channel was the school's own weekly webinar, and the most productive month was June.

The admissions funnel

From first enquiry to a learner on roll, quarter totals.

Where enquiries came from

44 new leads by source, and the same leads by temperature.

Enquiry volume by month

New leads created, June through August.

Trend to watch: enquiries halved between June (23) and August (9). Whether that is seasonality or a marketing gap is unresolved, and it is on the Q2 agenda.

Applications by grade sought

Which year groups families were looking for.

Demand was spread from Grade 1 to Grade 11 — evidence, as much as anything, that families are looking for an alternative across the whole school journey, not just at one stage.

Twenty-one facilitators carried the quarter.

Teaching load is spread deliberately thin so no single facilitator burns out: the busiest teacher ran 143 classes over sixty-one teaching days, the quietest fewer than ten — largely because they joined mid-quarter.

FACILITATORS WHO TAUGHT

21

Three joined during the quarter; twenty are on roll as active facilitators.

TEACHING-QUALITY REVIEWS

167

Structured supervisor reviews completed and scored.

AVERAGE REVIEW SCORE

7.47_{/10}

Across teaching quality, punctuality, learner engagement, communication and professionalism.

COVER ARRANGEMENTS

46

Substitutions arranged against 237 recorded leave entries, so no cohort lost a class to a facilitator absence.

Curriculum documentation

Lesson plans submitted for review, by month and status.

Twenty-three lesson plans were written and fourteen approved by seven facilitators. This is a practice still finding its feet — it is good for the school that facilitators can see each other's planning, and it is not yet a habit. We are not going to pretend otherwise.

Operational readiness

The unglamorous work that made the quarter run.

The school ran on its own software.

Hash Future School teaches on a platform it builds itself — classes, attendance, work, marking, points, houses, mentorship, admissions and support all in one system. That system was exercised hard this quarter, and every number in this report is a by-product of it.

MESSAGES SENT

11,977

Across 1,104 conversations, by 116 different people — staff, mentors and houses.

SUPPORT TICKETS

119

56 resolved and 11 closed; 52 still open or in progress at quarter end.

DAILY REPORTS GENERATED

10,523

4,455 learner reports and 6,068 parent reports, written and delivered automatically.

DOCUMENT INTAKE PROCESSED

39

Employee and onboarding documents filed through the platform's docket system.

Where the platform fell short

Two operational measures we would rather publish than hide.

 13.5 days

Days from a ticket being raised to being closed.

 52 tickets

Open or in progress at quarter end.

Built this quarter

Capability added to the platform during June, July and August — the groundwork for what launched in September.

 977

 1,004

 4,455

 6,068

 1,104

Five things this quarter told us to fix.

An impact report that only counts wins is a marketing document. These are the gaps this data exposed, each with the number that exposed it and the target we are setting for Q2.

GAP 01 · MARKS RETURNED LATE

9.8 days

Average time between a learner submitting work and receiving a grade. August grading completion fell to 63%, and 549 pieces of work were never graded at all. **Q2 target: 90% of work graded within 72 hours, and no cohort carrying a backlog across a month.**

GAP 02 · ATTENDANCE

71.7 %

Participation is steady but not good enough: 3,356 absences in a quarter, and a 27-point gap between the strongest cohort (87.6%) and the weakest (60.8%). **Q2 target: 80% participation, with a named owner for every learner below 60%.**

GAP 03 · NOT ENOUGH CHALLENGE

1.9 /5

Learners rate how challenged they felt at 1.9 while rating enjoyment at 4.2 — they are happy and comfortable, and comfort is not stretch. **Q2 target: publish a stretch tier on every activity and move the challenge score above 3.**

GAP 04 · RETENTION

22 left

Twenty-two learners left and thirteen joined, so the school grew slowly while working hard. Attrition is the highest-leverage number in this report. **Q2 target: an exit conversation with every family, and each reason coded into the platform.**

GAP 05 · SUPPORT RESPONSIVENESS

13.5 days

Average time to close a support ticket, with 52 tickets still open at quarter end. In a school where a parent's question is usually about their child's day, two weeks is too long. **Q2 target: first response inside one working day, closure inside three.**

And the groundwork for what came next

Two capabilities were built and validated during this quarter and switched on immediately after it closed: an adaptive AI quiz engine that adjusts question difficulty in real time, and a Deep Dive practice environment. In the first two weeks of September they generated 729 adaptive sessions and 21,557 answered questions. They are not counted anywhere in this report — they are next quarter's story.

Where every number in this report came from.

How the data was produced

Reproducible, source-of-truth, no estimates.

Tables catalogued in the school schema **237**

The full operational schema was mapped before any figure was reported.

Aggregate queries executed **45**

Counts, distributions, trends and cohort breakdowns, all scoped to the reporting period.

Records aggregated **72,053**

Attendance records, submissions, recognition events, feedback responses and messages combined.

Modelled or estimated figures **0**

Every number in this report is a count, sum or average of real records.

No figure in this report is modelled, projected or estimated. Each is a direct aggregate of records in the school's own database, retrieved read-only through the school's MCP interface and aggregated by period. Where a metric could be read two ways, the more conservative reading is used.

Scope, definitions and exclusions

Reporting period

**1 June 2026 – 31 August 2026
inclusive**

Teaching days

**Distinct calendar dates with at
least one attendance record: 61**

Participation rate

**Records marked present, late or
partial, divided by all records**

Active learner

**Holds at least one attendance
record inside the period**

Graded

**A submission with a status of
graded and a numeric mark**

Excluded — by design

**All financial data: fees, payroll,
invoices, budgets, expenses and
any ledger reporting**

Privacy

**Learner-level records are
aggregated only; quoted material
is anonymised and reproduced
verbatim**

Source

**Future Assist platform ·
school_management database ·
read-only queries via MCP**

An AI-first online school for ages 6–18. We don't read résumés. We read lives.

Report

Quarter 1 · 2026–27

1 June – 31 August 2026

Generated 22 September 2026

Prepared from the school's own operational records. Financial data is deliberately excluded from this report. Learner-level data is presented in aggregate; individual quotations are anonymised. Figures are point-in-time aggregates of the reporting period and may be restated as late submissions are graded.
